

# WASHINGTON VERTical

## PACIFIC NORTHWEST **CLEAN ENERGY INNOVATION HUB**

### Clean Energy Supplier Alliance

*Growth in the clean energy sector will be unprecedented in the coming decades, but a domestic supply chain doesn't exist to support new technologies expansion.*

*Washington VERTical is an industry-led coalition based in Richland, Washington. Our initial strategy is to establish the clean energy supply chain alliance that:*

- Solves industry-wide supply chain challenges and accelerates innovation
- Ensures the readiness of the next generation industry workforce
- Delivers consistent quality, safety and performance excellence standards
- Provides efficiency and security of a domestic supply chain

Our clean energy supply chain alliance is the first U.S.-based coalition to address emergent industry needs and reduce costs and schedule of nuclear and other advanced clean energy projects.

This industry-led effort will deliver a comprehensive and integrated supply chain framework that is scalable and cost-effective for communities throughout the country to utilize when building advanced clean energy projects.

## PACIFIC NORTHWEST **CLEAN ENERGY INNOVATION HUB**

### **Clean Energy Supply Chain Alliance Membership**

Washington VERTical's Clean Energy Supplier Alliance's founding members range from large global corporations to Central Washington small businesses, with vast experience from mechanical design and fabrication to professional services and everything in between to build and operate advanced and small modular nuclear reactors and other clean energy projects.

We will recruit more companies to join the Alliance based on industry needs and support their qualification to provide products and services required by advanced and small modular reactor projects.

While our members will include many companies that have historically competed against each other, the actions of founding members will model our objective of fostering industry collaboration.

#### ***Membership Qualifications & Benefits***

All businesses seeking membership will be welcome, understanding that supplying products and services to nuclear projects requires specifically vetted qualifications that satisfy nuclear supplier requirements.

*The value of Clean Energy Supplier Alliance membership includes:*

- B2B partnering opportunities
- Access to new markets
- Shared business development resources
- Pathway for the attainment of nuclear supplier credentials

#### ***Founding Members:***

- Babcock Services
- Fluid Controls & Components
- Fluor
- Framatome
- HiLine Engineering & Fabrication
- HukariAscendent
- Sargent & Lundy
- Tetra Tech
